

MEMORANDUM FOR: Task Force Vanguard

THROUGH: Center for Disease Control, Domestic Security Coordination Council

SUBJECT: Denver Situation, identifying and assessing perpetrator's capacity for further attacks potentially biologic in nature.

1. This memorandum is a request for information obtained during interrogations of suspected perpetrators. Specifically, if this group possesses the capacity for more mass casualty events or the ability to produce biological weapons.

A) Identifying similarities in attacks

Any information on characteristics shared between the attacks including before the attack occurred. Did the attacks share similar strategies during the planning and preparation phases? Anything that can be used as a flag for a future attack?

B) Understanding reach of the organization

As seen in the Aum Shinrikyo doomsday cult organizations with enough influence can obtain both chemical and biological agents. Is there any indication of access to laboratories or the acquisition of chemicals that could lead to weapon production?
